**Julia Language**

Julia is a modern and easy to use high performance programming language. It provides a sophisticated compiler, parallel execution, numerical accuracy, and an extensive library of fast mathematical functions. While it is an open source project with a diverse community of almost 500 contributors around the world, research on Julia is anchored at MIT.

Today, the Julia community counts close to 500 contributors and is racing towards 1000 open source packages. It is being used by a number of universities for teaching and research, and by businesses in areas as diverse as engineering, finance, and e-commerce, to name a few.

Julia Computing, Inc. builds products for users of the Julia language, as well as provides a number of related professional services.
